ABSTRACT: This checklist presents the Heteropteran species published from Albania, with critical consideration of the available primary literature, the present national territory, and the plausibility of identification. A total of 649 species were considered for validation. The records of thirteen species are now located outside Albania: *Oncochila scapularis* (Fieber, 1844), *Tingis (Tingis) crispata* (Herrich-Schaeffer, 1838), *Dicyphus (Brachyceroea) annulatus* (Wolff, 1804), *Horistus (Primihoristus) orientalis* (Gmelin, 1790), *Acetropis (Acetropis) carinata* (Herrich-Schaeffer, 1841), *Orthocephalus bivittatus* Fieber, 1864, *Campylomma verbasci* (Meyer-Dür, 1843), *Scolopostethus thomsoni* Reuter, 1875, *Peritrechus geniculatus* (Hahn, 1832), *Dicranocephalus marginicollis* (Puton, 1881), *Tritomegas bicolor* (Linnaeus, 1758), *Eurydema (Horvatherydema) fieberi* Schummel, 1837, and *Leprosoma inconspicuum* Baerensprung, 1859. The report of one species, *Heterotoma planicornis* (Pallas, 1772), is based on a citation error. On the other hand, some species which were published a fairly long time ago and overlooked in earlier catalogues, could be added. Because of differing opinions on their taxonomic status, the likelihood of misidentification, or unclear assignment to present-day Albania, we had to place a question mark over 62 of the species recorded.

PËRMBLEDHJE: Ky katalog përmbledh speciet e rendit Heteroptera të raportuara nga Shqipëria, duke shqyrtuar në mënyrë kritike literaturën shkencore primare të disponueshme, përkatësinë ndaj territorit aktual të Shqipërisë dhe saktësinë e identifikimit. Në total, u analizuan 649 specie për verifikim. Trembëdhjetë specie rezultojnë të jenë të regjistruara jashtë territorit të Shqipërisë: *Oncochila scapularis* (Fieber, 1844), *Tingis (Tingis) crispata*

(Herrich-Schaeffer, 1838), *Dicyphus (Brachyceroea) annulatus* (Wolff, 1804), *Horistus (Primihoristus) orientalis* (Gmelin, 1790), *Acetropis (Acetropis) carinata* (Herrich-Schaeffer, 1841), *Orthocephalus bivittatus* Fieber, 1864, *Campylomma verbasci* (Meyer-Dür, 1843), *Scolopostethus thomsoni* Reuter, 1875, *Peritrechus geniculatus* (Hahn, 1832), *Dicranocephalus marginicollis* (Puton, 1881), *Tritomegas bicolor* (Linnaeus, 1758), *Eurydema (Horvatheurydema) fieberi* Schummel, 1837 dhe *Leprosoma inconspicuum* Baerensprung, 1859. Regjistrimi i një specieje, *Heterotoma planicornis* (Pallas, 1772), është rezultat i një gabimi citimi. Nga ana tjetër, disa specie të raportuara prej kohësh, por të anashkaluara në katalogët e mëparshëm, mund të përfshihen. Për shkak të pikëpamjeve të ndryshme mbi statusin e tyre taksonomik, mundësisë së gabimeve në identifikim ose pasigurisë lidhur me përkatësinë e tyre ndaj territorit të sotëm të Shqipërisë, është vënë në dyshim përkatësia e 62 specieve të regjistruara.

INTRODUCTION AND HISTORY OF THE HETEROPTEROLOGICAL RESEARCH IN ALBANIA

Many of the Heteroptera records from Albania date back to a time when parts of today's neighbouring countries were still included. To ensure accuracy, we have reviewed this data, which has often been uncritically adopted in later catalogues. Dallas (1851, 1852) reports on hemipterous insects housed in the Museum of Natural History in London (BMNH) are considered to include the first documented heteropteran species in Albania. However, the information provided does not go beyond 'Albania, leg. W. Wilson Saunders'. Therefore, it is uncertain whether these records, as well as those of Horváth (1876), are actually located in present-day Albanian territory. The species listed by Walker (1875), Reuter (1891), and Horváth (1906) are few. However, they named the localities more precisely, allowing for a clear assignment to present-day states. Schumacher (1914) published the first comprehensive list of Albanian Heteroptera. He combed through the entomological collection of the Bosnian-Herzegovinian State Museum in Sarajevo (ZMBH). The material studied was collected by Apfelbeck (undated), by Mustajbek Kurbegović from 1897 and 1898, by Latif Buljabašić from 1905, and by Winneguth from 1906 and 1908. It is worth noting that Schumacher identified many of these specimens before Horváth (1916), who had also identified them but had not labelled them and only published his notes two years after Schumacher. As a result, the lists of both authors largely coincide. Shortly thereafter, Royer (1922, 1923, 1924a, and 1924b) reported on his studies of material collected by Rivet and co-workers on the Balkan peninsula between 1916 and 1918. Csiki (1940) also collected material in the north and east of present-day Albania during his travels in the Balkans between 1916 and 1918. The yield, which took more than 20 years to process and publish, ended up in the Hungarian National Museum in Budapest (HNHM). Mancini (1953) supplemented these lists with numerous new species found in the collections of the Natural History Museum in Vienna (NHMW), Austria. The specimens are from collections by Penther in 1914, by Karny who collected in 1917 and 1918, by Capra (undated), and another unnamed expedition. Mancini also integrated Albanian data from 1941, which was made available to him by Tamanini. Josifov (1970) studied the Heteroptera of the Albania expedition, carried out by the German Entomological Institute in Eberswalde (former GDR, today Germany) in 1961. The vast majority of individuals were deposited in the Senckenberg Deutsches Entomologisches Institut in Müncheberg, Germany (SDEI); a few specimens remained in the Zoological Institute of the Academy of Sciences in Sofia, Bulgaria (ZISB). According to our knowledge, Misja (1970, 1973) was the first Albanian entomologist to study true bugs in his country. The bugs collected by him are housed in the Natural History Museum Tirana, Albania (NMHT). Halimi (2011) and Halimi et al. (2010, 2014, 2018, 2020, 2024) have since published

a doctoral thesis and several articles on the topic. Apart from some smaller works, such as Gkrazntani & Kallenborn (2023) and reports on naturalists' community platforms on the Heteroptera of Albania, the work of Graf et al. (2018) on the aquatic invertebrate fauna of Vijosa is particularly important for nature conservation.

MATERIAL AND METHODS

Taxonomy and nomenclature: It is unsurprising that the taxonomy and nomenclature of many species recorded from Albania needed updating, particularly those mentioned in older literature. The Catalogue of the Palaearctic Heteroptera (Aukema & Rieger, 1995–2006; Aukema et al., 2013) was primarily used as a guideline in our work, along with its continuously updated online version edited by B. Aukema. When citing literature, we use the original references in their original language. An exclamation mark '!' in literature citations indicates that the author has personally verified the reference. Our comments are enclosed in square brackets [], where [?] denotes a questionable record that should be verified, [x] denotes a deletion, and [sic] denotes an exact replication, not a spelling error on our part.

Locations: When citing literature, original information is used for locations. As Albania's current borders have only been in effect since 1912 and 1925, we put a question mark on them if older literature citations or collection material with the reference 'Albania' do not contain any more precise information about place or date. This also applies to the distribution data from Stichel (1955–1962), which is only cited if there are no other references to Albania available. Table 1 presents the current names of the record localities in Albania, along with information on the municipality unit (Lnjësi administrative), municipality (Komunë or Bashkia), and county (Qark) according to the 2015 local government reform. This table includes both the indefinite and definite forms of proper names, as both can be found in literature or on maps. Examples are Durrës, Durrësi and Tiranë, Tirana. Apart from that, we use only the indefinite form. Some old or foreign-language place names, such as Italian 'Valona' for Vlorë or 'San Giovanni di Medua' for Shëngjin, presented certain difficulties. The lists of Albanian records created by Friese (1967) and Lack & Barina (2020), as well as the GeoNames geographical database website, have been a welcome help. However, for some locations mentioned in the literature, we were not able to identify them or to do so unambiguously (see Table 2). Table 3 lists those records that currently belong to countries other than Albania.

Collection abbreviations: The following abbreviations refer to depositories and will be used in square brackets throughout the text:

ZIUT: Zoological Institute, University of Tirana, Albania.

ZMAS: Zoological Institute, Russian Academy of Sciences, St. Petersburg, Russia.

ZMBH: Zemaljski Muzej Bosne i Hercegovine (National Museum of Bosnia and Herzegovina), Sarajevo, Bosnia and Herzegovina.

Online platforms: We only considered reports from online platforms such as iNaturalist or Flickr if they were of particular interest, such as first or rare reports from Albania, and if identification of species was confirmed.

RESULTS AND DISCUSSION

The list below presents suprageneric taxa in systematic order as provided by Aukema & Rieger (1995–2006), with genera and subgeneric taxa listed alphabetically. Bold print indicates species and subspecies whose occurrence in Albania is confirmed or highly probable. Any comments we have on the taxon or documented records are found in the 'Note' section. The locations of records are presented in current spelling along with the superordinate administrative structure. Figure 1 depicts the locations of Heteroptera records across the various districts of Albania.

Heteropteran species recorded from Albania

Infraorder: DIPSOCOROMORPHA Miyamoto, 1961

DIPSOCORIDAE Dohrn, 1853

[?] *Alpagut castaneovitream* (Linnavuori, 1951)

Location of record: ?

Reference: [?] Kerzhner, 1995: Albania. [?] Fent et al., 2011: Albania.

Note: Josifov (1986, as *Cryptostemma (Harpago) castaneovitream*) and Heiss & Péricart (2007, as *Harpago castaneovitream*) classify this species as part of the Pontic and Eastern Mediterranean fauna, without mentioning Albania.

Cryptostemma (Cryptostemma) alienum Herrich-Schaeffer, 1835

Location of record: Petrelë (Tiranë, Qark Tiranë).

Reference: Mancini, 1953 (as *Cryptostemma alienus* [sic] H. S.): Petrela (leg. Tamanini, 1941).

Infraorder: NEPOMORPHA Popov, 1968

Superfamily: NEPOIDEA Latreille, 1802

NEPIDAE Latreille, 1802: NEPINAE Latreille, 1802

Nepa cinerea Linnaeus, 1758

Locations of records: Martanesh (Bulqizë, Qark Dibër); Orosh (Mirdita, Qark Lezhë); Shkodër (Qark Shkodër); Velipojë (Shkodër, Qark Shkodër).

Vienna, 1914–1918) [NHMW]. Misja, 1970 (as *Belostoma [sic] cordophanum* M.): Elbasan (IV.1964). [?] Perez Goodwyn, 2006: Albania, 1 ♀ (undated; St. Petersburg Museum collection, Russia) [ZMAS]. Halimi, 2011 (as *Belostoma cordophanum* Montandon, 1898): Farkë (13.VII.2009).

Superfamily: CORIXOIDEA Leach, 1815

[?] MICRONECTIDAE Jaczewski, 1924 [Corixidae Leach, 1815: Micronectinae Jaczewski, 1924]

[?] *Micronecta (Dichaetonecta) scholtzi* (Fieber, 1860)

Location of record: [?] Berat (Qark Berat).

Reference: Jansson, 1986: [?] Berat.

Note: No original record of this species on Albanian territory has been found. However, the distribution map No. 2 by Jansson (1986) indicates a museum specimen from the vicinity of the city of Berat, which he checked (black circle) but did not specify.

[?] *Micronecta (Micronecta) griseola* Horváth, 1899

Location of record: [?] Kutë, Vjosë (Mallakastër, Qark Fier).

References: [?] Graf et al., 2017: Vjosa river (2014–2017).

Note: Graf et al. (2018) did not document this species, despite working with the same material. The determination of this specimen is considered questionable, according to W. Rabitsch (pers. comm.).

[?] CORIXIDAE Leach, 1815: CYMATIAINAE Walton, 1940

[?] *Cymatia coleoprata* (Fabricius, 1777)

Locations of records: [?] Durrës (Qark Durrës); [?] Velipojë (Shkodër, Qark Shkodër).

Reference: [?] Schumacher, 1914 (as *Notonecta glauca* L. var. *marginata* Muell.): Durazzo (leg. Apfelbeck); Velipoja (leg. Mustajbeg Kurbegović, 1897–1898) [ZMBH].

Note: Kirkaldy (1897) synonymised *Notonecta marginata* Müller, 1776 with *Notonecta obliqua* Thunberg, 1787. Kerzhner (1994) considered it identical with *Cymatia coleoprata* (Fabricius, 1777). For further information, see Polhemus, 1995.

CORIXIDAE Leach, 1815: CORIXINAE Leach, 1815

***Corixa affinis* Leach, 1817**

Locations of records: Berat (Qark Berat); Durrës (Qark Durrës); Kutë, Vjosë (Mallakastër, Qark Fier); Librazhd (Qark Elbasan); Prroj Dunavec (Korçë, Qark Korçë); Shkodër (Qark Shkodër); Velipojë (Shkodër, Qark Shkodër); Vlorë (Qark Vlorë)

1924a: Dunavec (IX, 2 ♀). Mancini, 1953: Berati, Libraz, Scutari [Shkodër] (leg. Tamanini, 1941). Graf et al., 2018: Kutë, Fluss Vjosa (IV.2017).

***Corixa punctata* (Illiger, 1807)**

Locations of records: Korçë (Qark Korçë); Maliq (Qark Korçë); Prroj Dunavec (Korçë, Qark Korçë); Shkodër (Qark Shkodër); Velipojë (Shkodër, Qark Shkodër).

References: Schumacher, 1914 (as *Corixa geoffroyi* Leach, 1817): Velipoja (leg. Mustajbeg Kurbegović, 1897–1898) [ZMBH]. Horváth, 1916 (as *Corixa Geoffroyi* [sic] Leach, 1817): Velipoja. Royer, 1924a (as *Corixa Geoffroyi* [sic] Leach, 1817): environs de Koritza [Korçë] (VIII, 1 ♂); Dunavec (IX, 1♀). Mancini, 1953: Scutari [Shkodër] (leg. Tamanini, 1941). Misja, 1973: Maliq (30.VII.1970) [NHMT].

***Hesperocorixa moesta* (Fieber, 1848)**

Locations of records: Prroj Dunavec (Korçë, Qark Korçë); Velipojë (Shkodër, Qark Shkodër).

References: Schumacher, 1914 (as *Arctocorixa moesta* Fieb.): Velipoja (leg. Mustajbeg Kurbegović, 1897–1898) [ZMBH]. Horváth, 1916 (as *Arctocorixa moesta* Fieb.): Velipoja. Royer, 1924a (as *Arctocorixa moesta* Fieb.): Dunavec (IX, 1 ♂, 1 ♀).

***Hesperocorixa parallela* (Fieber, 1860)**

Locations of records: Fushë Lurë (Dibër, Qark Dibër); Vlorë (Qark Vlorë).

References: Horváth, 1916 (as *Arctocorixa parallela* Fieb.): Valona. Josifov, 1970 (as *Corixa (Hesperocorixa) parallela* (Fieber, 1860)): Luria östlich Kurbneshi, Lan Lure [Fushë Lurë] (Wiesen in 1300 m, 19.–24.VII.1961) [SDEI].

***Hesperocorixa sahlbergi* (Fieber, 1848)**

Locations of records: Durrës (Qark Durrës); Librazhd (Qark Elbasan); Petrelë (Tiranë, Qark Tiranë); Shkodër (Qark Shkodër); Velipojë (Shkodër, Qark Shkodër).

[?] *Sigara (Halicorixa) mayri* (Fieber, 1860)

Location of record: [?] Sarandë (Qark Vlorë).

Reference: Jansson, 1986: [?] Sarandë; Jansson, 1995: Albania.

Note: No original record of this species on Albanian territory has been found. However, according to distribution map No. 34 by Jansson (1986), a museum specimen from the vicinity of the city of Sarandë exists (black circle).

***Sigara (Pseudovermicorixa) nigrolineata nigrolineata* (Fieber, 1848)**

Locations of records: Fushë Lurë (Dibër, Qark Dibër); Korçë (Qark Korçë); Librazhd (Qark Elbasan); Lushnjë (Qark Fier); Petrelë (Tiranë, Qark Tiranë); Prroj Dunavec (Korçë, Qark Korçë); Shkodër (Qark Shkodër); Velipojë (Shkodër, Qark Shkodër).

References: Schumacher, 1914 (as *Arctocorixa nigrolineata* Fieb.): Velipoja (leg. Mustajbeg Kurbegović, 1897–1898) [ZMBH]. Horváth, 1916 (as *Arctocorixa nigrolineata* Fieb.): Velipoja. Royer, 1924a (as *Arctocorixa Fabricii* [sic] Fieb.): Dunavec (1 ♂, 1 ♀). Mancini, 1953 (as *Sigara nigrolineata* Fieb.): Lusnia, Libraz, Petrela, Scutari [Shkodër] (leg. Tamanini, 1941). Josifov, 1970 (as *Sigara (Pseudovermicorixa) nigrolineata* (Fieber, 1848)): Lurja östlich Kurbneshi, Lan Lure [Fushë Lurë] (Wiesen in 1300 m, 19.–24.VII.1961) [SDEI]. Misja, 1973 (as *Sigara nigrolineata* Fieb.): Korçë (27.VIII.1970) [NHMT].

[?] *Sigara (Sigara) dorsalis* (Leach, 1817)

Note: This species possibly occurs in Albania. A record by Grupče (1961) from Lake Scutari (Liqen i Shkodrës) could refer to either Albania or Montenegro.

Sigara (Sigara) striata (Linnaeus, 1758)

Locations of records: Prroj Dunavec (Korçë, Qark Korçë); Velipojë (Shkodër, Qark Shkodër).

References: Schumacher, 1914 (as *Arctocorisa striata* L.): Velipoja (leg. Mustajbeg Kurbegović, 1897–1898) [ZMBH]. Horváth, 1916 (as *Arctocorisa striata* L.): Velipoja. Royer, 1924a (as *Arctocorisa striata* L.): Dunavec (IX, 3 ♂).

Note: Schumacher (1914) mentions the locality 'Janina', which is now known as Ioannina (Albanian Janinë, Janina) and is part of Greece.

Sigara (Vermicorixa) lateralis (Leach, 1817)

Locations of records: Lushnjë (Qark Fier); Velipojë (Shkodër, Qark Shkodër); Vlorë (Qark Vlorë).

References: Schumacher, 1914 (as *Arctocorisa hieroglyphica* Duf.): Velipoja (leg. Mustajbeg Kurbegović, 1897–1898) [ZMBH]. Horváth, 1916 (as *Arctocorisa hieroglyphica* Duf.): Velipoja, Valona. Mancini, 1953 (as *Sigara hieroglyphica* Duf.): Lusnia (leg. Tamanini, 1941).

Sigara (Vermicorixa) scripta (Rambur, 1840)

Location of record: Lushnjë (Qark Fier).

Reference: Mancini, 1953: Lusnia (leg. Tamanini, 1941).

NAUCORIDAE Leach, 1815: NAUCORINAE Leach, 1815

Ilycoris cimicoides cimicoides (Linnaeus, 1758)

Locations of records: Buçimas (Pogradec, Qark Korçë); Prroj Dunavec (Korçë, Qark Korçë); Velipojë (Shkodër, Qark Shkodër).

References: Schumacher, 1914 (as *Naucoris cimicoides* L.): Velipoja (leg. Mustajbeg Kurbegović, 1897–1898) [ZMBH]. Horváth, 1916 (as *Naucoris cimicoides* L.): Velipoja. Royer, 1924a (as *Naucoris cimicoides* L.): Dunavec près Koritza [Korçë] (IX, 1 sp.); marais de Starova [Buçimas] (IX, 1 sp.).

APHELOCHEIRIDAE Fieber, 1851

Aphelocheirus (Aphelocheirus) aestivalis (Fabricius, 1794)

Location of record: Kutë, Vjosë (Mallakastër, Qark Fier).

Reference: Graf et al., 2018: Kutë, Fluss Vjosa (IV.2017).

NOTONECTIDAE Latreille, 1802: ANISOPINAE Hutchinson, 1929

Anisops sardeus sardeus Herrich-Schaeffer, 1849

Locations of records: Shkodër (Qark Shkodër); Velipojë (Shkodër, Qark Shkodër).

Note: According to Heiss (2006), the two specimens from the Natural History Museum Vienna, Austria were found in the Albanian locality of 'Fuša, Rappojanit, Ricarvaš, 1800 m, Vermosa Rapsa'. It is certain that this refers to the trough valley Ropojani or Ropojana, which is part of the Albanian Alps (Prokletije), and is located southwest of the town of Vusanje in present-day Montenegro. Although the meaning of 'Ricarvaš' remains unclear, 'Vermosa Rapsa' is a reference to the villages of Vermosh and Rhapshë on the Albanian side.

Location of record: Lushnjë (Qark Fier).

Reference: Misja, 1973: Lushnjë (03.VIII.1971) [NHMT].

Note: According to Aukema et al. (2013) the record in Misja (1973) needs verification.

[x] *Peritrechus geniculatus* (Hahn, 1832)

Note: Aukema et al. (2013) cite Misja (1973) as the source for an Albanian record. However, Misja (1973) quotes Csiki (1940), who reads 'Korita'. Friese (1967) interprets this 'Csiki site' as a locality north of Goduša [in the Bijelo Polje district], Montenegro.

***Peritrechus gracilicornis* Puton, 1877**

Locations of records: Bicaj (Kukës, Qark Kukës); Mirditë (Qark Lezhë); Tiranë (Qark Tiranë); Vorë (Qark Tiranë).

ACKNOWLEDGEMENTS

We would like to thank Berend Aukema, Bennekom, for his careful review of our list, his many valuable suggestions, and his encouragement to publish it. Anila Papparisto, Tirana, was an invaluable help in obtaining Albanian literature which was difficult to obtain.
